SUBJECT: SC3000 Series / iMac-G3 Serial Connection **Document No.: 20276**

Product: SC3000 series	Applies to: Connection to iMac or “Blue G3”

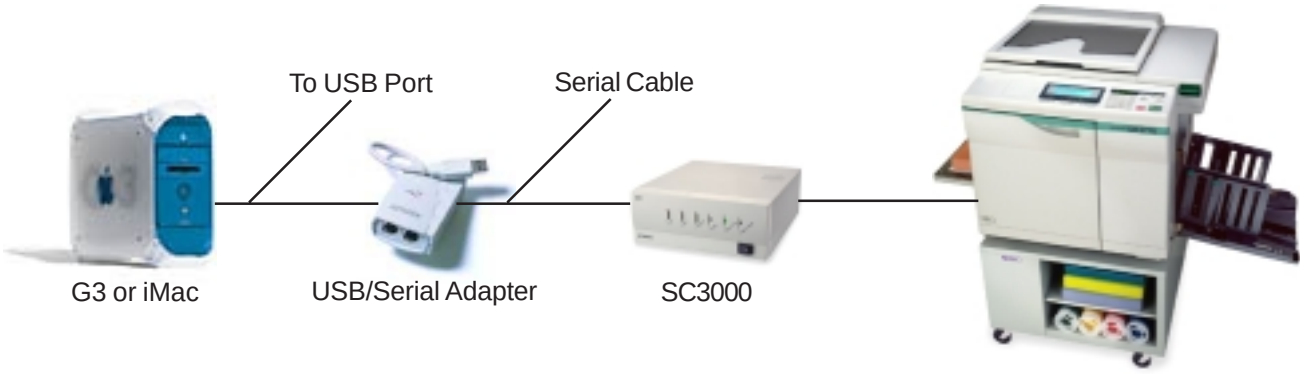
[ ] Software [X] Hardware [ ] Operation [ ] Other

Summary: Some of the newer Macintosh computers such as the iMac and “Blue G3” cannot be connected directly to the SC3000 because they do not have an RS422 serial port (they have USB and EtherTalk ports instead). A 3rd party USB-to-Serial adapter can be purchased to solve this problem.

Note: LocalTalk cabling is not supported. Serial communication should be used.

Procedure: To solve the problem mentioned above, purchase a 3rd party serial adapter. Riso recommends the **Keyspan USB Serial Adapter USA-28**:

Features:

Plugs into a USB port on an iMac or “Blue G3” PowerMac
Provides two RS-422 mini-DIN8 ports
Supports data rates up to 115.2 Kbps per port
Draws its power from the USB connection (a power adapter is not required)
Emulates the printer port on one port (on iMac or “Blue G3”)


For more details go to **www.keyspan.com.**
